The use of l', n' and t' in Russian and Bulgarian (where they are not transliterations of a single letter, but merely l, n or t followed by the soft sign) is included to emphasise the fact that they are used for single letters only in Serbian.

'Shch' and 'sht' invariably represent the letter III, in Russian and Bulgarian, respectively, since the pairs of letters (IIIh in Russian and IIIT in Bulgarian) seem never to occur consecutively in the respective languages.

The above table is reproduced, by permission, from the pamphlet 'The transliteration of Russian, Serbian and Bulgarian for bibliographical purposes' published by the Royal Society, Burlington House, London W1 (February 1953). It represents the system at present in use in Science Abstracts for the transliteration of the names of journals and the names of authors of articles abstracted.

OTHER INSPEC SERVICES

SDI

(Selective Dissemination of Information.)

This is a service individually tailored to the requirements and interests of the engineer or research worker. Every two weeks details of information relevant to the interest profile of the individual subscriber are selected from the data being processed for the INSPEC Database.

TOPICS

This is an SDI service based on standard profiles. There are over 80 subjects covering high-activity areas of research and development. This is an inexpensive service designed to alert engineers and researchers to the availability of literature within their subject area.

TAPES

The INSPEC Tape Services contain all the information included in the INSPEC publications. They are updated 50 times per year. They enable the larger research and development organisations to produce their own internal information and current-awareness services.

The emIS Datareviews Series of Books

These publications are collections of articles specially written by the world's leading experts in semiconductor materials research. They cover the properties of the most widely used, and up and coming materials. The information is considered the most current and up-to-date which has been verified by those researchers at the forefront of technology. Each book is highly structured and has a comprehensive subject index.

Current Books in the series are:-

**Amorphous Silicon
Gallium Arsenide
Mercury Cadmium Telluride
Silicon
Lithium Niobate
Indium Phosphide**
